

E-Commerce /Virtual Terminal and Mobile Payments in One Easy Solution

E-Commerce/Website Integration

Complete Website Integration

The RPS payment gateway integrates with your website and shopping cart, authorizing in real time and processing payments. If you don't already have a shopping cart, we can provide you with one in your color scheme and using your logo.

Workflow

Website talks to your shopping cart -> which talks to our secure, PCI-compliant gateway -> which talks to the credit card processor -> which talks to all major card associations.

Multiple Tender Types

You can choose to accept credit cards, ACH/eChecks or both. It's up to you.

Authorizations

Done real-time, so if there's a problem with a card, the customer is notified while still connected, and can fix the problem or use another card while still online.

PCI Compliance

The RPS gateway is fully PCI-compliant. PCI standards are continually being revised and updated; it only makes sense to have professionals maintain sensitive card data and remove the liability of a breach.

Support

Domestic technical support. Always here. When you need help.

Telephone Sales/Virtual Terminal

Save Returning Customer's Information

Shipping address, credit card, everything is stored for future orders.

Multiple Tender Types

Just like the gateway, you can choose to accept credit cards, ACH/eChecks or both. It's up to you.

Authorizations

Done real-time, so if there's a problem with a card, the customer is notified while still connected, and can fix the problem or use another card while still online.

Mobile Payments

Same RPS payment gateway

The RPS payment gateway can also be used in a mobile environment for keyed transactions or with a card reader for swiped transactions.

B2B Sales / P-Card

The RPS payment gateway can process B2B P-cards at the lowest rate, and can provide your customers the level II and level III reporting data they need for their purchases.
